

01.

Differential Equation

$$\frac{dy}{dx} - \exp(-y) = 0$$

$$\frac{dy}{dx} - e^{-y} = 0 \Rightarrow \frac{dy}{e^{-y}} = dx$$

$$e^y = x + C$$

$$y = \ln(x + C)$$

$$y(0) = \ln C \Rightarrow C = 1$$

$$y = \ln(x + 1)$$
